Fun with the Computer

By Twelve the Chimpanzee

Hello, everybody! Today we will learn how to visit websites with our computers.

Websites are collections of digital documents stored on computers called web servers that are connected by the internet. Websites were originally designed to display static content, but now websites can have interactive elements, like maps, forms, and even games! Web browsers are computer programs that are used to navigate and view these documents.

Cont. on page 2

	6			7	1		3	4
3		4						1
								9
		6	1					
8		2	7	6				4
				5	8			6
6				4		9		7
9		3		1	6	4	5	
				2				

Last Week's Solution:

3								
	♣	♦	♥					♠
♦	♠	♥		♣				
		♣	♠	♦	♥			
♠	♥		♦			♣		
♥			♣	♠		♦		
♣	♦	♠		♥				

4

Total Concentration

The blank squares below should be filled with whole numbers between 1 and 30 inclusive, any of which may occur more than once, or not at all.

The numbers in every horizontal row add up to the totals on the right, as do the two long diagonal lines; while those in every vertical column add up to the totals along the bottom.

		3		23	24		123
11	29				1		128
1		10	24	10		22	118
25	4	24	12	18		18	94
22	20	27		17	9	30	113
	16		1	15	5	13	151
30		11	18	15	28	7	85
							131
118	119	117	111	123	85	147	98

What's a computer's favorite dance?

Disk-o!
Joke

Dopey Dan by Riley Hagel

Fun with the Computer *by Twelve the Chimpanzee, cont. from page 1*

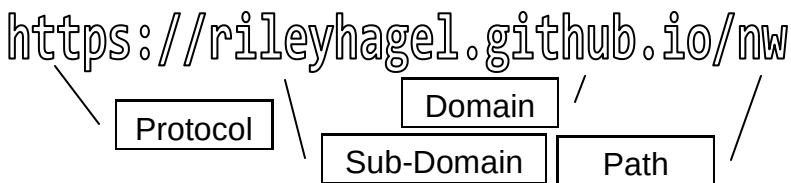

To view a website, the user types in the URL of a website. URL stands for Universal Resource Locator. A URL is sometimes called an address, or web address, because it's like a street address for web servers. A URL usually looks like `http://www.example.com`, or `http://www.example.com/page`. The second URL has an extra part, `/page`, pointing to a specific page or directory on the server. Once you have entered the URL, the browser sends a message to the server at the URL you typed in, saying that it wants to get the page there. The server sends a message back. This message will either contain the webpage, or say that the page could not be found.

We can do this activity with a laptop, a PC, a smartphone, or a tablet. This is easiest on a computer or laptop. *Please remember, though: ALWAYS ask an adult before using the internet!*

The first step is to open your web browser application. On a computer or a laptop, this might be Chrome, Firefox, or Edge. On a phone or a tablet, this might be Safari or Chrome. Whatever device you are using, launch your web browser.

After you have opened your web browser, look around at the buttons, text fields, and controls. Right under the top of the window, there should be a long bar. The long bar will often say: "Search with Google or Enter an Address". Click or tap here, and type in `https://rileyhagel.github.io/nw`. Then press enter. You should see the *Neighborhood Weekly* homepage!

Now, let's break down the URL you typed in.

WOW! That's a lot! Let's go over it part by part. The protocol (`https://`) tells the browser and the server how to talk to each other. HTTP stands for Hyper-Text Transfer Protocol. It's called Hyper-Text because web pages can have special text called hyperlinks (usually blue and underlined) that sent the browser to different pages. HTTPS is just HTTP Secure. It uses an encrypted connection that makes it safer for sending important information, like passwords, over the connection. The Domain (`github.io`) is the hosting service we use to host our website. The host has a web server we can put our files on, so we don't have to worry about keeping up a server in Riley's house. The Sub-Domain sends you to a specific place on the host's server: Riley's websites! He has several. The Path (`/nw`) is a path to a specific file on the server. The path can have several sub-directories, or folders, that tell the server exactly where to get the file from.

Now, to finish up our activity, click on the hyperlink to the Secret Fun Zone and use the password on page 2! I hope you had fun, and maybe even learned something!

Enter the Secret Fun Zone

Visit our website, and click on the link to the Secret Fun Zone.

This week's Password is:
twelve the chimp

Want to tell the neighborhood something?

Let me know at rileyhagel32@gmail.com and I'll put it in for free!

Some regular content is not in this issue. However, the content should continue to be included in future issues.
